

Application No. 09/709,809
Response to Office Action of August 3, 2004

AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1-10. (Cancelled)

11. (Original) A system receptive to selective tuning to particular frequencies, said system comprising:

a display device;

an audio synthesizer; and

a controller in communication with said display device and said audio synthesizer, wherein said controller communicates with said audio synthesizer when a malfunction is detected with respect to said display device.

12. (Original) A system according to claim 11, wherein said controller comprises an electronic processor circuit.

13. (Original) A system according to claim 11, wherein said audio synthesizer audibly synthesizes a frequency at which said system is currently tuned.

14. (Original) A system according to claim 11, wherein said system comprises a navigation system.

15. (Original) A system according to claim 11, wherein said system comprises a communications system.

16. (Original) A system according to claim 11, wherein said system comprises a navigation and communications system.

Application No. 09/709,809
Response to Office Action of August 3, 2004

17-22. (Cancelled)

23. (Original) An apparatus adapted to be selectively tuned to individual frequencies, said apparatus communicating with an audio synthesizer and a display device, said apparatus comprising:

a processor which: i) detects a first operating mode; ii) tunes the apparatus to a predetermined frequency, if the first operating mode is detected; iii) controls the audio synthesizer to generate an audio announcement of a frequency at which the apparatus is currently tuned, if the first operating mode is detected; and iv) controls the display device to display a frequency at which the apparatus is currently tuned, if the first operating mode is not detected.

24. (Original) The apparatus according to claim 23, wherein said processor programs the audio synthesizer, if the first operating mode is detected.

25. (Original) The apparatus according to claim 24, wherein said processor tunes the radio to a selected frequency.

26. (Original) The apparatus according to claim 25, wherein after tuning the radio, said processor waits for the frequency to change.

27. (Original) The apparatus according to claim 23, wherein the first operating mode corresponds to a failure of the display device.

28. (Currently Amended) A method of providing feedback of a first selected setting in a system including a signal receiving device, said method comprising the steps of:
visually presenting the first selected setting during a first mode; and
audibly presenting the a second selected setting during a second mode, the second selected setting a default setting that is selected upon failure of a visual display.

29. (Original) A method according to claim 28, further comprising the step of determining the termination of the first mode.

Application No. 09/709,809
Response to Office Action of August 3, 2004

30. (Cancelled)

31. (Currently Amended) A method according to claim 28, wherein the first selected setting comprises a frequency.

32. (Currently Amended) A method of providing information regarding a system, the system adapted to receive signals over a range of frequencies and adapted to tune to individual frequencies within the range, said method comprising the steps of:

tuning the system to a first frequency;

visually displaying the first frequency during a first mode of operation; and

audibly announcing the first frequency during a second mode of operation; and

the second mode of operation entered upon the inability to visually display the first frequency.

33. (Cancelled)

34. (Currently Amended) A method according to claim ~~33~~ 32, wherein upon entering the second mode of operation, said method further comprises the steps of resetting the system to a predetermined frequency, and audibly announcing the predetermined frequency.

35. (Original) A method according to claim 32, further comprising the step of audibly announcing the first frequency during the first mode of operation.

36. (Original) A method according to claim 32, wherein said system comprises any one of a navigation system, a communications system and a navigation/communications system.

37. (Original) A method according to claim 36, wherein said system is for use in an aircraft.

Application No. 09/709,809
Response to Office Action of August 3, 2004

38. (Currently Amended) Computer executable code stored on a computer readable medium, the code to provide information regarding a system, the system adapted to receive signals over a range of frequencies and adapted to tune to individual frequencies within the range, said code comprising code to:

tune the system to a first frequency;

visually display the first frequency during a first mode of operation; and

audibly announce the first frequency during a second mode of operation; and

the second mode of operation entered upon failure to visually display the first frequency.

39. (Cancelled)

40. (Currently Amended) A system receptive to selective ~~tuning~~ tuning at particular frequencies, said system comprising:

means for displaying;

means for audio synthesizing a frequency signal; and

means for controlling communication with said displaying means and said audio synthesizing means, wherein said control means communicates with said audio synthesizing means when a malfunction is detected with respect to said displaying means.

41. (Cancelled)

42. (Original) Computer executable software code stored on a computer readable medium, the code for use with an apparatus adapted to be selectively tuned to individual frequencies, the apparatus communicating with an audio synthesizer and a display device, said code comprising code to:

detect a first operating mode;

tune the apparatus to a predetermined frequency, if the first operating mode is detected;

control the audio synthesizer to generate an audio announcement of a frequency at which the apparatus is currently tuned, if the first operating mode is detected; and

control the display device to display a frequency at which the apparatus is currently tuned, if the first operating mode is not detected.
